Micki,

Please log in this comment on the Red River Valley Water Supply Project Draft Environmental Impact Statement and distribute it to team members.

Thanks,

Signe

I would like to have a few answers to some logical questions. Why is the reservoir with the lowest water level the highest target and the lake with the highest water level (Devils Lake) not even considered as a candidate to supply water for the Red River Valley. By looking on the map the Sheyenne River could carry water from Devils Lake all the way to Fargo with very little pumping. Therefore eliminating a magnitude of problems. There must be a complex explanation for not using such a simple remedy. Could you respond to genos@minot.com
