I think it both criminal and insane for tiny No Dakota, 47th (sized) state of the entire US to employ three 8,000 horsepower motors, drawing 2,000 feet of water per second from the Missouri river...causing downstream folks to suffer loss of drinking water, power plant coolants along this beautiful river, the transfer of harmful organisms, etc. All for the ND develop[ment of industry and irrigation. Leave nature alone!!! North Dakota is showing extreme selfishness at the cost to its downstream neighbors. Fargo is doing just fine....it does not need rob its neighbors to provide some supposed "Drought Protection" and to enhance its (ND) ethanol plants and industry. 3 - 8,000 ft per second syphons are some mighty big straws sucking the life from that river.
