Dear fellow Ladies and Gentleman and Leaders,

It is with great concern for both countries future sustainability, enviromental and social harmony that on behalf of our children, our wildlife and the very spirit of water energy that I am writing to you today.

It appears that the more we know the less good we do.

It appears that our forefathers on both sides of the border had more respect for the enviroment and society as a whole than we currently do.

Our modern day greed and short sightedness has raped the land causing the polluted water ways to exceed their banks and destroy all that it touches.

It appears that both countries just want to put a band-aid on this crucial water transboundary crisis rather than dealing with the truths and causes that got us all here in the first place.

It is time to set aside our egos and our wallets and deal with what is our children's future and safety.

What both countries know for sure is that our modern day agriculture, municipal and urban practices and drainage management systems has removed the last few tree lines and wildlands out there causing water energy to flow at dangerous rates destroying and polluting all that comes into its path because those natural habitat filters have been destroyed.

So, if this is the cause of our water problems than the solutions should be to restore these wetlands, wildlands, riparian - buffer zones, and tree filters, immediately. To bring back the science of enviromental harmony to our countries that once was there. We have come full circle. We, in our hearts know better and for our childrens global future, we can do better!

Now, we need to make this rebalancing of Mother Nature, her land and sacred water a priority for both Nations.

We need to **value and support the farmers and land owners vital role in restoring and maintaining the wildlands** in order to take some of the deadly power away from water energy and to turn it into water energy that is being respected, filtered and honored as opposed to feared.

**Canada and the United States are world leaders!** Let us work together, share our knowledge and face our Truths in order to deal with the consequences of our actions and intentions.

Water energy is one out of five of the core elements that makes up this world.

**Water energy right now is in its destructive cycle** because it is out of balance with the other four elements, fire, earth, metal and wood.

**The last 50 years in North America, we have experienced metal energy be over utilized at alarming rates. Metal energy has been used to destroy wood and earth energy. We are living with the adverse accumulative effects of our actions all over this great continent. It is time to face this truth and do something constructive about it which does not include more metal energy but rather wood energy. The necessary global sustainable action plan to change the negative chi energy of water is to restore the cycle back to a productive one of harmony and balance of all 5 core elements by increasing the positive flow of wood energy. This is our traditional knowledge and science. This has to be given top National priority, respect, dignity and funding!**

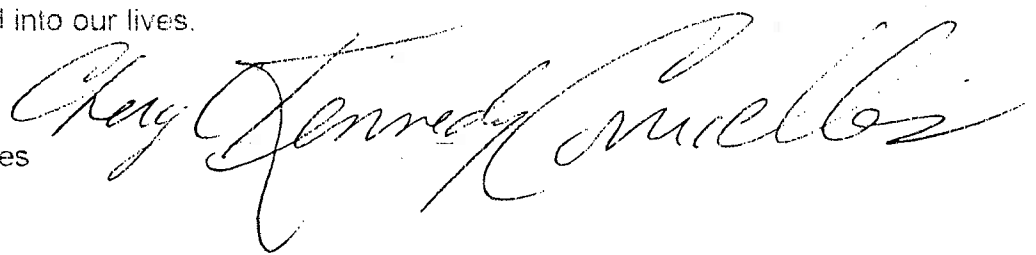

As an animal whisper, energy healer, artist, and mother, it saddens and weakens the soul and spirit of these great Nations for humankind to see, hear and know these truths and turn the other cheek. Humankind is the weakest link. We on this virgin continent owe it to our unborn children and our heritage to correct our path, to restore and respect Mother Nature and the Animal Kingdom. Spirit energy is not happy with our actions nor our current intentions.

The signs are all here, one way or another. We are at the Tipping Point. Let us do each other proud and help one another. Our wildlife and water know no borders! Our mutual corporation on our own water crisis should also be with respect and dignity to one another and to our future generations and sustainability.

Time to put back the Wild into our lives.

Yours truth fully,

Cheryl Kennedy Courcelles
